

## ABSTRACT OF THE DISCLOSURE

[0043] A sandwich wrap includes a heat seal coating which, after a sandwich has  
5 been wrapped into a package, and heat has been applied to the heat seal coating,  
produces a seal that prevents the package from accidentally becoming unwrapped  
during handling. A portion of the wrap located remotely of the heating surface remains  
unsealed, and can be peeled away to gain access to the sandwich.
